

* 171161 **General Biology 1.2** 9–12 Interactive

General Biology 1.2 continues with the study of life, focusing on the five kingdoms of living organisms. Starting with bacteria, themes such as respiration, reproduction, and metabolism are studied. Moving through the kingdoms into the animal realm, more complex themes, such as defense, are studied. Students will understand how diverse forms of life complete similar essential life functions in this laboratory-based course. Successful completion is based on participation in class discussions, student submissions, and maintaining consistent communication with the teacher. Carla Streng
