

# Review Worksheet 2

Solve using any Method

$$\textcircled{1} \quad x = -\frac{4}{3}y + 1$$

$$-2y - 3x = -4$$

$$\textcircled{2} \quad 3x - 5y = 2$$

$$10y - 6x = 3$$

$$\textcircled{3} \quad 2y = 5x + 1$$

$$3x - 6y = 2$$

$$\textcircled{4} \quad x = -\frac{4}{5}y + 7$$

$$y = \frac{7}{3}x - 2$$

$\textcircled{5}$  Find the equation of the line parallel to  $3x - 4y = 6$  through Midpoint of  $(3, -5)$  and  $(a, 3)$
