

Hacker High School Lessons: Security Awareness for Teens: Internet Legalities and Ethics

In HHS, you will find lessons on utilizing Internet resources safely such as web privacy, chat protection, viruses and trojans (malware), and the over-all focus on how to recognize security problems on your computer. All lessons work with a free "live linux" CD which will boot off any PC with a CD-rom drive to perform the lessons. HHS is a great supplement to student course work or as part of after-school and club activities.

The HHS program is developed by ISECOM, a non-profit, open-source research group focused on security awareness and professional security development and accreditation.

This lessons focuses on Internet Legalities and Ethics, including scams, phishing, etc.
